Application

Maintaining the undifferentiated state of hiPS cell

Differentiated (control)

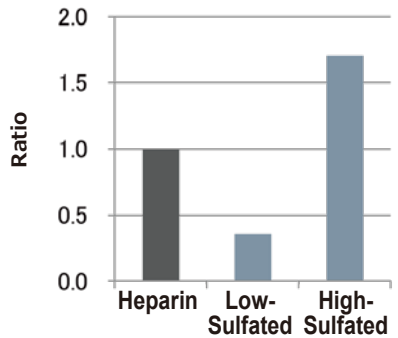

Undifferentiated (Hyaluronic Acid, High-Sulfated)

Sulfated hyaluronic acid maintains the undifferentiated state of hiPS cells under feeder-free and bFGF-free conditions.

These data were kindly provided by Prof. Shoko Nishihara and Dr. Taichi Miura, Soka University.

Stabilization of bFGF

Low- and high- sulfated hyaluronic acid were individually added to bFGF and incubated at 37°C for 3 days, followed by SDS-PAGE and image analysis to calculate the bFGF content.

High-sulfated hyaluronic acid has a greater capacity to preserve bFGF than heparin.
