Phytochemicals

Phytochemical is a general term for natural botanical chemicals found in, for example, fruits and vegetables. Phytochemicals are not necessary for human metabolism, in contrast to proteins, sugars and other essential nutrients, but it is believed that phytochemicals affect human health. Phytochemicals are components of herbs and crude drugs used since antiquity by humans, and significant research into phytochemicals continues today.

Atropine [A0754], a tropane alkaloid, was first extracted from the root of belladonna (*Atropa belladonna*) in 1830s. Atropine is a competitive antagonist of muscarine-like actions of acetylcholine and is therefore classified as an antimuscarinic agent.

[A0754]

Galantamine Hydrobromide [G0293] is a tertiary alkaloid found in the bulbs of *Galanthus woronowi*. Galantamine has shown potential for the treatment of Alzheimer's disease.

[G0293]

(+)-Bicuculline [B1890] is a phthalide isoquinoline alkaloid isolated from a variety of plants, *Dicentra*, *Corydalis*, and *Adlumia*, genera of the *Fumariaceae* family. Bicuculline blocks GABA_A receptors selectively.

[B1890]

Asiatic Acid [A2475] is a pentacyclic triterpene extracted from *Centella asiatica* which is a tropical medicinal plant. Asiatic Acid possess wide pharmacological activities.

[A2475]

Curcumin [C0434] [C2302], a dietary constituent of turmeric, has chemopreventive and chemotherapeutic potentials against various types of cancers.

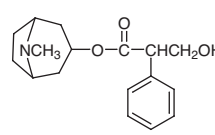

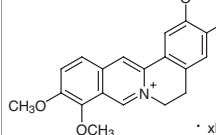

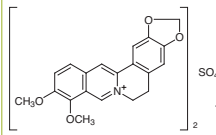

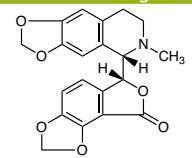

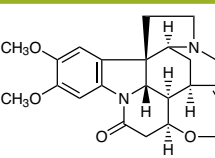

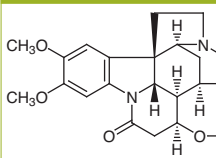

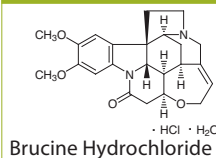

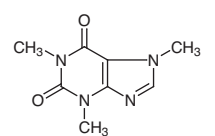

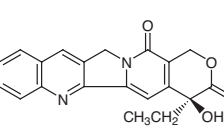

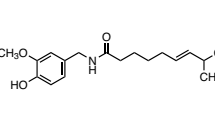

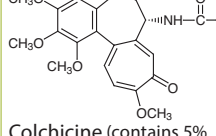

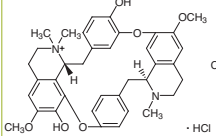

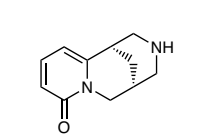

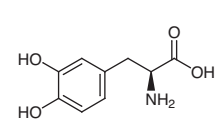

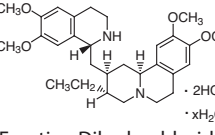

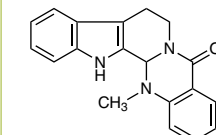

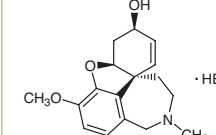

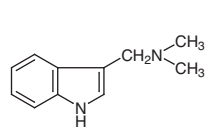

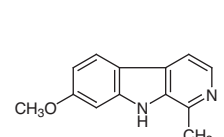

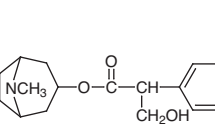

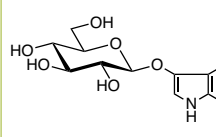

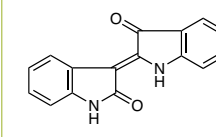

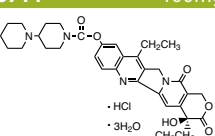

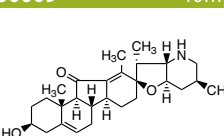

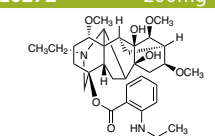

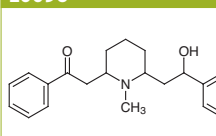

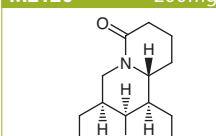

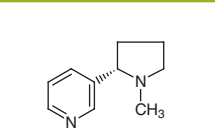

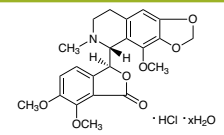

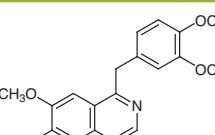

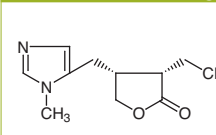

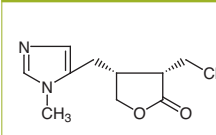

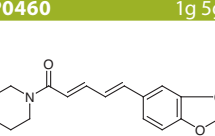

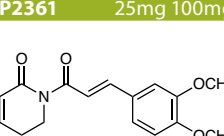

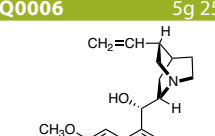

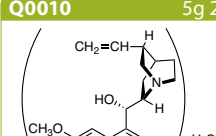

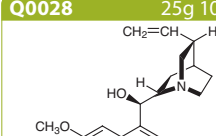

[C0434] [C2302]

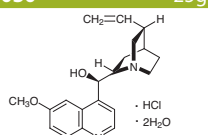

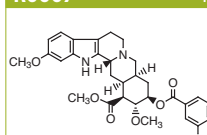

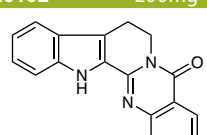

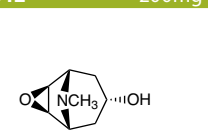

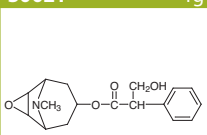

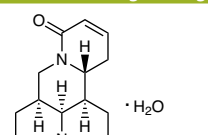

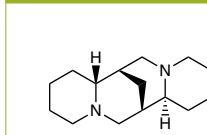

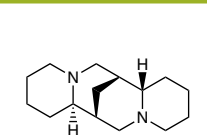

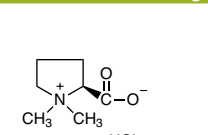

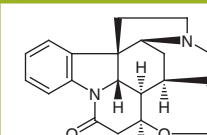

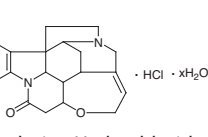

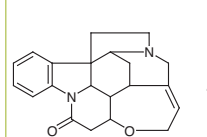

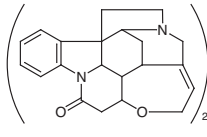

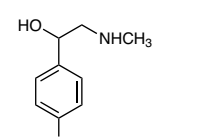

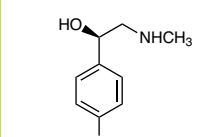

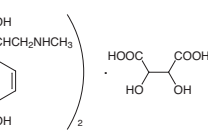

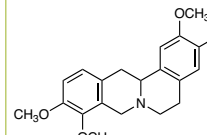

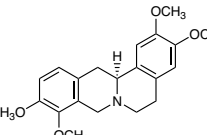

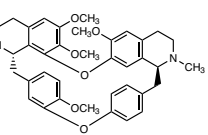

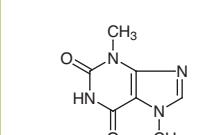

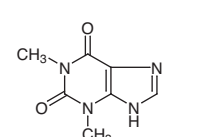

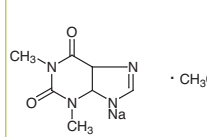

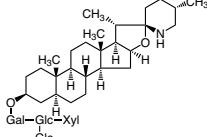

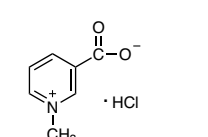

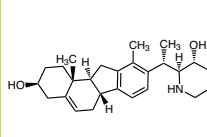

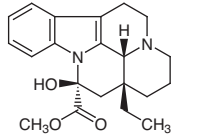

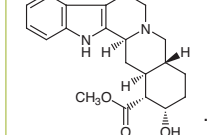

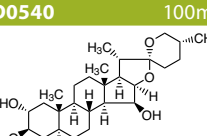

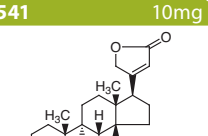

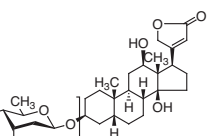

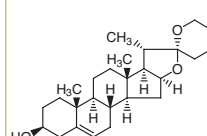

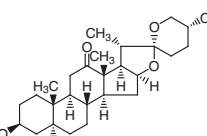

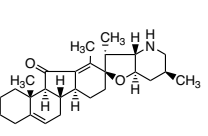

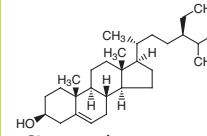

TCI provides many phytochemicals such as alkaloids, steroids, terpenoids, phenylpropanoids, polyphenols and etc.
