# Nucleoside Analogs for Synthetic mRNA Pseudouridines

1-Methylpseudouridine (= m<sup>1</sup>Ψ)

100mg / 1g

[M3387]

Pseudouridine (Synthetic) (= Ψ)

100mg

[P2939]

In recent years, numerous studies have demonstrated the outstanding abilities of mRNA to elicit potent immunity, making it a viable new platform for vaccine development. Additionally there are reports on incorporation of modified nucleobases into mRNA offering advantages for the generation of potent and long-lived antibody responses. In protein biosynthesis, 1-methylpseudouridine (m<sup>1</sup>Ψ) and pseudouridine (Ψ) are read like uridine (U) and enable comparatively high protein yields. Furthermore, 1-methylpseudouridine enhances immune evasion, protein production, and consequently vaccine efficacy.<sup>1,2)</sup> TCI provides these products through the development of our sophisticated manufacturing process.
