

Organocatalyst Usable for the Oxidative Dimerization of Grignard Reagents

Advantages

- Four-electron Oxidant Transitions from Stoichiometric to Catalytic
- Effective for the Dimerization of Grignard Reagents Using Air as a Co-oxidant

Applications

Reference T. Korenaga, K. Nitatori, H. Muraoka, S. Ogawa, K. Shimada, *Org. Lett.* **2015**, *17*, 5500.

1,2-Bis[2,3,5,6-tetrafluoro-4-(trifluoromethyl)phenyl]-3,3,4,4,5,5-hexafluoro-1-cyclopentene

500mg [B5426]

Organocatalyst Usable for the Oxidative Dimerization of Grignard Reagents

Introduction of the Researcher

Organic Synthetic Chemistry Laboratory (The Korenaga Group)

Department of Chemistry and Biological Sciences, Faculty of Science and Engineering, Iwate University

Research Description

The Korenaga research group focuses on the strategy and development of homogeneous catalysis. Their group has developed fluorinated arylphosphine ligands to reduce catalytic loading in transition-metal catalysis. In addition, they have developed organocatalysts for traditionally transition-metal catalyzed reactions. The Korenaga group takes advantage of computational quantum chemistry to develop and refine novel catalysts, and collaborates with their quantum calculations with other laboratories.

Experimental Procedure

B5426 (60.8 mg, 0.1 mmol), THF (1.0 mL) and PhMgBr in THF (1.0 mol/L, 1.0 mmol) is added to a flame-dried Schlenk flask under argon atmosphere. The reaction mixture is stirred at 50 °C for 6 h under the dry air. After addition of saturated NH₄Cl solution, the reaction mixture is extracted with EtOAc. The organic layer is dried over Na₂SO₄ and is concentrated under reduced pressure. The resulting mixture is purified by silica gel column chromatography to give biphenyl in 93% yield as a white solid.
