

Xylem Differentiation-Inducing Polyamine Xylemin

Xylemin Dihydrochloride

250mg / 1g [X0080]

Xylemin is a polyamine whose unique function was reported by Taku Takahashi, Hiroyasu Motose *et al.* at Okayama University in 2016. It promotes xylem differentiation with co-treatment of synthetic proauxin (2,4-D IOE) by the inhibition of thermospermine biosynthesis. (thermospermin suppresses xylem differentiation.)

Fig 1. Cotyledons of *Nicotiana benthamiana* cleared after fixation. (Left ; Grown in the media not containing xylemin and proauxin.) (Right ; Grown in the media containing xylemin and proauxin.)

Fig 2. Xylemin has an effect on dwarfing. (Right ; *Arabidopsis thaliana* grown with xylemin applied on its shoot apex.)

Fig 3. Synergistic effect of xylemin in ectopic xylem differentiation of cotyledons of *A. thaliana*.

Image data and every kind of information have been provided by Prof. Taku Takahashi and Assoc. Prof. Yasuhiro Motose at Okayama University.
