

New

Air-stable and Recyclable Cobalt Precatalyst for the [2+2+2] Cycloaddition

Advantages

- Air-stable and Recyclable Co(I) Complex
- Applicable to Thermal or Microwave Promoted [2+2+2] Cycloadditions
- Alternative for Precious Metal Catalysts

Applications

Co(I) complex catalyzed [2+2+2] cycloaddition

Procedure

The diyne (1 eq.) and catalyst (5–10 mol %) are weighted into a microwave reaction vial (10 mL) and flushed with argon. Afterward toluene (2–3 mL) and nitrile (5 eq.) are added via syringe and the tube is sealed with a septum. The reaction vessel is introduced to the microwave and heated at 140 °C. The solvent is removed under vacuum and the residue charged to silica gel. The crude product is purified on silica gel.
