CHEMISTRY

TCI

Cyclic Alkyl Amino Carbene (CAAC) Precursors

Advantages

- Stronger σ -donating property than NHC
- Applicable to complexation with various metals
- CAAC-Rh complex efficiently catalyzes hydrogenation

Applications

Experimental procedure:

[Rh(cod)Cl]₂ (194 mg, 0.393 mmol), **D5596** (300 mg, 1.05 eq.) and KHMDS (236 mg, 1.5 eq.) are added to a schlenk tube under an argon atmosphere. Dry THF (18 mL) is added dropwise over 10 min to the solids at -78 °C. The suspension is stirred for 10 min at -78 °C, after which the reaction mixture is allowed to warm up to room temperature. After stirring for 16 h at room temperature, the suspension is filtered, concentrated, adsorbed on silica gel and purified twice by column chromatography. After evaporation of the solvents, the complex is precipitated from a concentrated solution in dichloromethane with pentane to yield the desired complex 1 as yellow powder. Yield 63% (282 mg, 0.492 mmol).
